Flat 1, 12 Courtfield Gardens, London, SW5 0PL, UK

Educational Background

Imperial College London *Sep.'23-now*

PhD Student in Electrical and Electronic Engineering
Advisor: Prof. Angeli, David
Research topic: Nonlinear Consensus Dynamics and Applications
Awards:
- President's PhD Scholarships 2023 July.'23

Huazhong University of Science and Technology *Sep.'19-Jun.'22*

Master in Control Science and Engineering GPA: 87.7/100
Advisor: Prof. Su, Housheng
Core courses: Linear System Theory, Theory of Matrices, Optimum Control, Optimization Theory and Algorithms, Mathematical Statistics.
Awards:
- Outstanding Graduate of HUST May.'22
- Merit Postgraduate Dec.'20
- First-class Scholarship for Postgraduates Nov.'19, Nov.'21
- Third Prize of Zhixing Scholarship Dec.'21

Wuhan University of Technology *Sep.'15-Jun.'19*

Bachelor in Automation GPA: 91.9/100
Core courses: Automatic Control Theory, Modern Control Theory, Motion Control System, Circuit Principle, Advanced Mathematics, Complex Variable Function and Integral Transform.
Awards:
- Outstanding Graduate of WHUT Jun.'19
- Merit Student Nov.'16, Nov.'17, Nov.'18

Work Experience

Multiagent Network Games with Transmission Constraints Mar.'23-Aug.'23
The University of Hong Kong, Hong Kong *Research Associate*
Advisor: Prof. Lam, James

Research Experiences

Transmission-Constrained Consensus of Multiagent Networks Nov.'20-Apr.'22
Huazhong University of Science and Technology, Wuhan

- A novel model of multiagent systems is proposed where the information transmissions between agents are disturbed by irregular distortions or interferences.
- Obtained the necessary and sufficient conditions that agents can converge to consensus; Proved the existence, uniqueness and stability of equilibrium points.
- Added noise distortions, and studied the robustness of multiagent systems with transmission constraints.
- The transmission-constrained consensus problem over random networks is proposed and studied.

Interval Coordination of Multiagent Networks with Antagonistic Interactions
Huazhong University of Science and Technology, Wuhan Nov.'19-Mar.'21

- The interval consensus problem of multiagent systems with antagonistic interactions is first considered.

- Introduced the idea of a root node on a negative cycle to obtain the robustness of multiagent systems under signed networks.
- Extended the individual interval constraint to interval constraint in transmission.
- To prove the uniqueness of equilibrium, we convert the uniqueness of equilibrium to the uniqueness of a system of nonlinear equations and apply the Perron-Frobenius theorem to obtain a contradiction.

Research on key Technologies and Equipment of UAV-USV Formation Cooperation
Guangdong HUST Industrial Technology Research Institute, Dongguan Feb.'19-Jun.'19

- Established the dynamics of UAV and USV, respectively; Designed the formation controller.
- Introduced the distributed Kalman filtering to improve the measurement precision.
- Theoretically prove the effectiveness of the above algorithm, and participate in practical experiments.

Contests

2018 National Undergraduate Electronic Design Contest (Hubei Province),
Grand Prize, ranked **No.1** Aug.'18, Wuhan

2018 National Undergraduate Electronic Design Contest - Analog System Design Invitation Contest
First Prize Sep.'18, Nanjing

Update Date: April 30, 2024
